FOR IMMEDIATE RELEASE

System Concepts, Inc. - developer of the FOOD-TRAK® F&B Management System announces the release of the FOOD-TRAK MOBILE APPLICATION (FMA)

Scottsdale, AZ – March 12, 2018 – System Concepts, Inc. (SCI), a leading provider of food and beverage procurement, inventory, and culinary control software solutions, today announced the release of the FOOD-TRAK® MOBILE APPLICATION. SCI's FOOD-TRAK® cloud-based and in-house applications are widely used across the hospitality and food service industry by convention centers, amusement parks, restaurant groups, casinos, hotels, and premium country clubs.

The FOOD-TRAK® MOBILE APP (FMA) is a new FOOD-TRAK® module that installs on Android and Apple devices, connects directly to the FOOD-TRAK® System, requires no synchronization and provides flexibility and functionality on by far the most widely used mobile platforms – smartphones and tablets. It provides bar code scanning using the built-in camera, printing and even recipe viewing.

The first "complete" app of its kind, FMA is revolutionary with its ability to both eliminate paper and to collect data where it lives. Additional state-of-the-art features include:

- capture bar codes to improve accuracy and save time
- take inventory using templates or scan to cut inventory time in half
- create requisitions and transfers without looking for forms
- receive goods and confirm pricing and quantities against the original order
- view recipes right from the food prep line
- track waste as it happens

"Mobile platforms have been a part of the FOOD-TRAK® System for three decades and this app adds another powerful tool to our mobile arsenal. The FMA makes data collection at the source more efficient and productive with familiar – and in most cases – pre-existing devices, keeping acquisition costs and training time low." said Bill Schwartz, CEO.

The FOOD-TRAK® MOBILE APPLICATION (FMA) is now available on Apple's iTunes store and Google Play store.
