**SCI INTRODUCES NEW FOOD-TRAK® MOBILE SCANNER**

*Motorola MC5590 now available as part of SCI's Mobile Partner F&B inventory solution*

**Scottsdale, AZ – July 6, 2009** – System Concepts, Inc. (SCI), an industry leader in food and beverage cost control and developer of the FOOD-TRAK System, announced today the availability of its newest mobile handheld scanning device. The Motorola MC5590 is the latest addition to SCI's family of mobile scanners. These mobile scanners, called FOOD-TRAK Mobile Partners (FMPs), are portable, wireless data collection tools. This handheld technology provides food and beverage outlets with an efficient and accurate method for taking inventories as well as performing transfer, requisition and receiving functions. The FMP eliminates forms, streamlines data collection efforts, increases accuracy and saves significant amounts of time.

Brian Hames, Director of Food Services for a prominent SCI client in Seattle, Washington, recalls it taking up to six hours to inventory 1,000 items prior to using the FOOD-TRAK Mobile Partner. "With the FOOD-TRAK handheld device, our monthly inventory now takes just an hour," says Hanes.

This handheld brings a new level of functionality and flexibility to pocket-sized mobile devices. As the smallest and lightest Motorola rugged handheld, the MC5590 packs the power of a bar code scanner, camera, walkie talkie and mobile computer into a robust business class device, perfect for inventory management.

"The new MC5590 is an excellent addition to our selection of FMPs," says Jeff Nichols, SCI's Chief Technology Officer. "This handheld offers twice the memory, a faster processor and a more sensitive screen at a lower cost than other ruggedized units."
