

FOOD-TRAK® Software, developed by System Concepts, Inc., is one of the most widely used inventory and procurement systems in the food service and hospitality industry for controlling food and beverage costs. The innovative eFOOD-TRAK user interface now makes it possible to access the FOOD-TRAK system from the Internet and is a convenient way to centralize FOOD-TRAK without having to deal with large, resource-intensive configurations. Those familiar with FOOD-TRAK will find the transition to eFOOD-TRAK virtually seamless, as eFOOD-TRAK contains all of the same features as its predecessor. eFOOD-TRAK is best suited for clients with rapidly growing organizations, those needing a centralized solution to support their multi-site and multi-user systems and for clients with in-house web server capabilities and a knowledgeable IT department.

171015	Chard Pinot Noir	20.0000	750ml	253.0000	5,060.0000

eFOOD-TRAK Recipe Designer

FEATURES AND COMPATIBILITY

eFOOD-TRAK can be implemented in less time than with other configurations, as the functional side is installed on a single server and each user simply needs access to Internet Explorer to login to the system. eFOOD-TRAK alleviates the need for multiple software licenses, as in the case of a distributed deployment, since the software license is centralized on a server. The number of individuals accessing the software is limited only by the number of concurrent users licensed for the FOOD-TRAK system. eFOOD-TRAK is easily accessible whether users are located in the same building as the server or halfway around the world. Having the convenience of a centralized system keeps the IT staff in one location as opposed to servicing any number of workstations when issues occur or when upgrades need to be completed. eFOOD-TRAK is also an excellent configuration if “real-time” figures are required. The system offers real-time, batch and XML-based integration with your POS and Vendor system to allow accurate perpetual inventory figures upon demand.

eFOOD-TRAK is designed to operate in a Microsoft Windows environment utilizing Internet Explorer, Internet Information Services (IIS), Microsoft .NET technologies and Microsoft SQL Server (MSSQL), providing users with the best centralized solution in the industry today.

Requirements	Minimum
<i>Computer/Processor</i>	<i>1.8 GHz Pentium or better</i>
<i>Memory (RAM)</i>	<i>1 GB RAM</i>
<i>Hard Disk</i> <small>(minimum for installing and hosting system files. SQL databases and web repository files can take up significant hard drive space)</small>	<i>400 MB free hard-disk space</i>
<i>Network Card</i>	<i>10/100 Mbps</i>
<i>Operating System</i>	<i>Microsoft Windows XP Professional Microsoft Windows Vista, Business, Enterprise, or Premium Microsoft Windows Server 2000, Standard, Enterprise Microsoft Windows Server 2003, Standard, Enterprise, or Web editions (with SP2 or R2 or later) Microsoft Windows Server 2003, Small Business R2 editions All with the latest service pack (SP)</i>
<i>Internet Information Services (IIS)</i>	<i>Version 5.0 (included with Windows 2000 Professional and Windows Server 2000 Version 6.0 (included with Windows Server 2003 and Windows XP Professional)</i>
<i>Microsoft Data Access Components (MDAC)</i>	<i>Version 2.81 (included with Windows Server 2003) or later</i>
